PROFILE

5+ years in growth, analytics and entrepreneurship, with hands-on product work at Miracle of Mind. I worked with product and engineering teams on onboarding, engagement, retention and feature launches. I use user feedback, behavioural data and experiments to make product decisions and measure results. My background includes founding a marketing agency, co-founding a mental-wellness venture and completing CS50x.

- Introduced recurring challenges, incentives and leaderboards, and made streaks more visible. Sessions per user rose from 3.2 to 3.6, using a conservative 180-day aggregate; the daily-to-monthly active user ratio improved by 11%.
- Made streak cards shareable and introduced A/B testing within product launches. In-app sharing increased by over 21%.
- Built an 11,000+ user-testimonial database to inform product decisions. Set growth priorities and coordinated work across product, marketing, analytics and engineering.
- Led growth and business-side execution of the Rewards Store with the product team, introducing tangible rewards for meditation.
